Web Design

Study Program: Information System Class 2

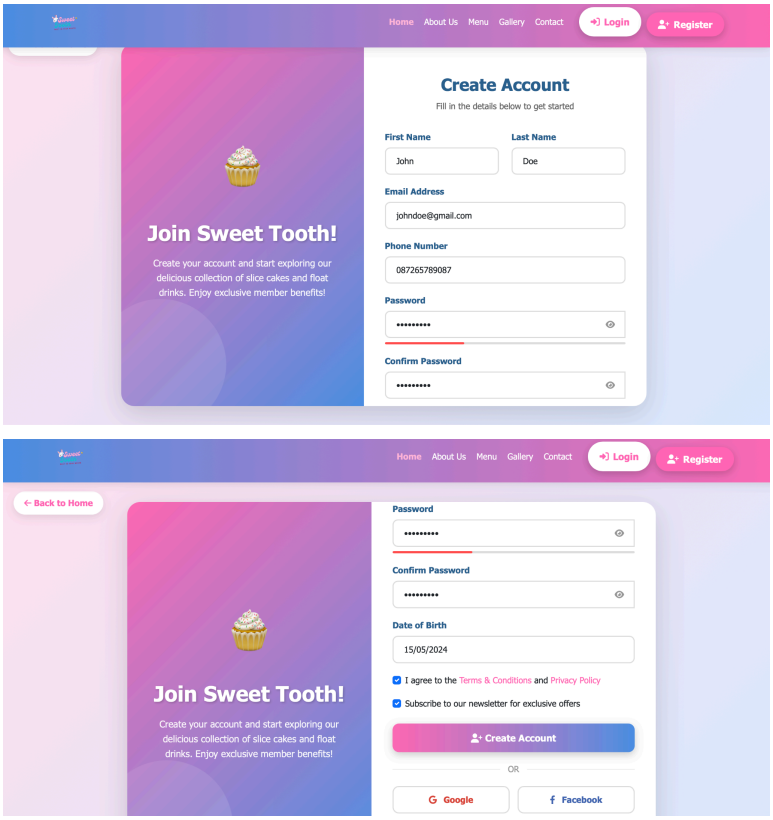
PROJECT 2 - WEB PROGRAMMING
INTERACTIVE WEB PROJECT

1. Introduction

This project continues from Project 1 where the main structure and UI of the Sweet Tooth website were developed. In Project 2, we enhanced the website with Javascript, jQuery, multiple forms, dynamic interactions, and event listeners based on the project requirements. This report explains each page, features added, and screenshots of the web interface as requested.

2.Requirement

2.1. Registration Page - (register.html) Form Validation



Form Fields:

- First Name
- Last Name
- Email Address
- Phone Number
- Password
- Confirm Password
- Date of Birth

- Terms & Conditions checkbox
- Newsletter subscription checkbox

Validation Implemented

- First name: cannot be empty
- Email: must follow correct format (text@domain.com)
- Phone number: at least 10 digits
- Password: minimum 8 characters
- Confirm password: must match password
- Terms checkbox: must be checked

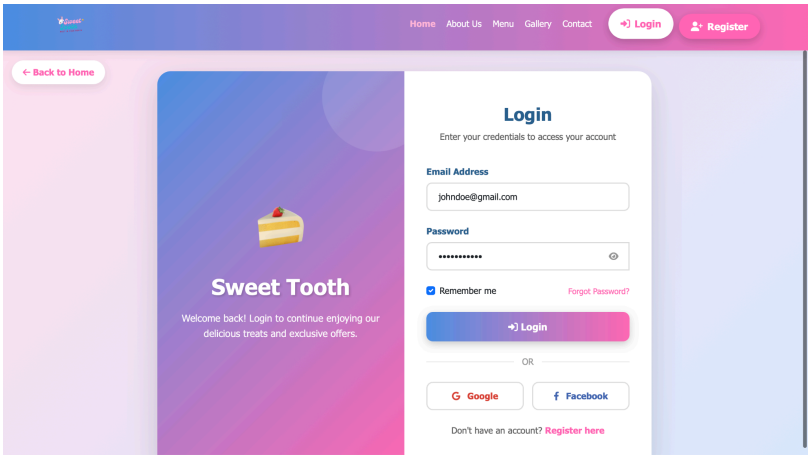
Example Error Messages for Screenshots

- “First name cannot be empty!”
- “Invalid email format! Example: user@domain.com”
- “Phone number must be at least 10 digits!”
- “Password must be at least 8 characters long!”
- “Passwords do not match!”
- “You must accept the terms and conditions!”

jQuery Usage

- Form validation using $('#registerForm').on('submit', ...)
- Password strength meter using keyup
- Show/hide password using click event on eye icon
- Terms checkbox validation

2.2. Login Page - (login.html) Form Validation



Validation Rules

- Email cannot be empty
- Password must contain at least 6 characters
- Error Examples for Screenshots
- “Email cannot be empty!”
- “Password must be at least 6 characters!”

jQuery Implementations

- $('#loginForm').on('submit', ...)
- .val() used to retrieve input values
- Password visibility toggle using click event

2.3. Forgot Password Form - (contact.html) Form Validation

Validation Rules

- Email cannot be empty
- Email must follow valid format

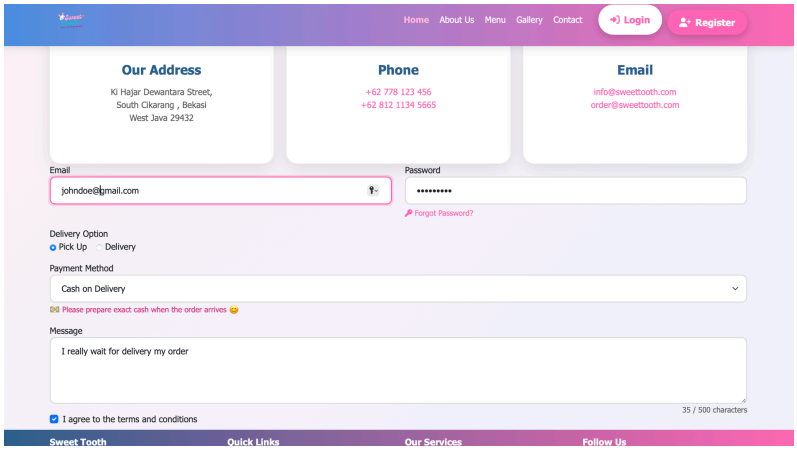
Error Messages for Screenshots

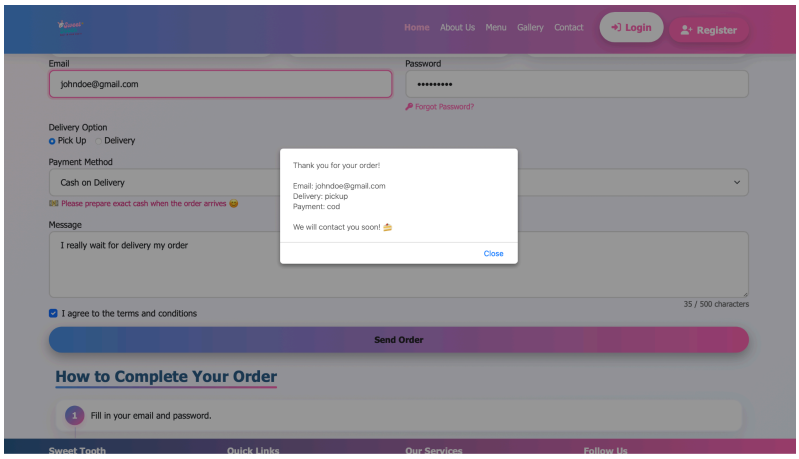
- “Email cannot be empty!”
- “Invalid email format! Example: user@domain.com”
- Success Message
- “Password reset link has been sent to: your-email@example.com”

jQuery Features

- Form displayed using .slideDown()
- Form closed using .slideUp()
- Validation using isValidEmail()

2.4. Contact / Order Form - (contact.html) Form Validation





Form Fields

- Email
- Password
- Delivery method (Pick Up / Delivery)
- Payment method
- Delivery address (appears only if Delivery is selected)
- Message
- Terms & conditions checkbox

Validation Rules

- Email → cannot be empty + must be valid
- Password → minimum 6 characters
- Delivery Option → required
- Payment Method → must be selected from dropdown
- Message → cannot be empty
- Address → required only when user selects “Delivery”

- Terms Checkbox → required

Multiple Validation Errors

- Valid email required
- Password must be 6+ characters
- Choose delivery option
- Choose payment method
- Message required
- Accept terms & conditions

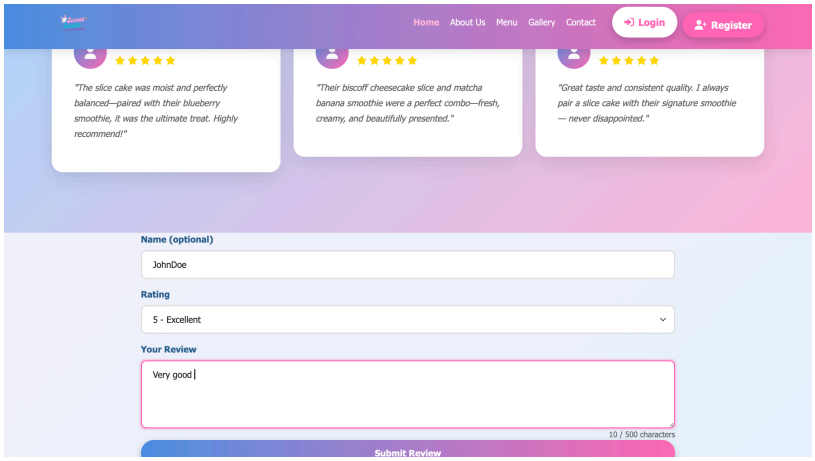
Success Message

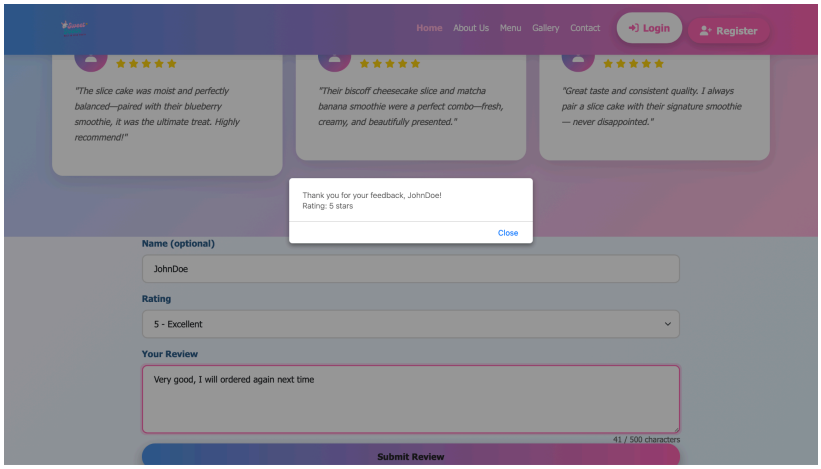
- Thank you for your order!
- Email: [user email]
- Delivery: [option]
- Payment: [method]
- We will contact you soon! 🍰

jQuery Implementation

- $('#contactOrderForm').on('submit', ...)
- .change() for showing delivery address
- .slideUp() and .slideDown()
- .val(), .trim()
- Radio button selection using $('input[name="delivery"]:checked').val()

2.5. Testimonial Form - (gallery.html) Form Validation





Validation Rules

- Rating must be selected
- Review cannot be empty
- Review must contain at least 10 characters

Error Messages for Screenshots

- “Please select a rating!”
- “Review message cannot be empty!”
- “Review must be at least 10 characters long!”

jQuery Features

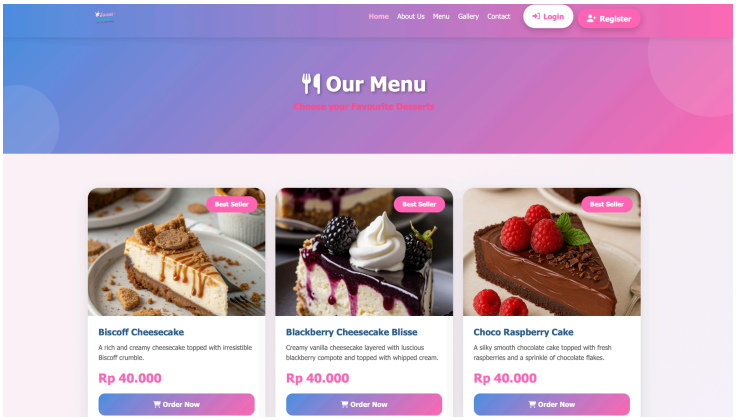
- Star rating using click events
- Textarea validation
- Form submission handling

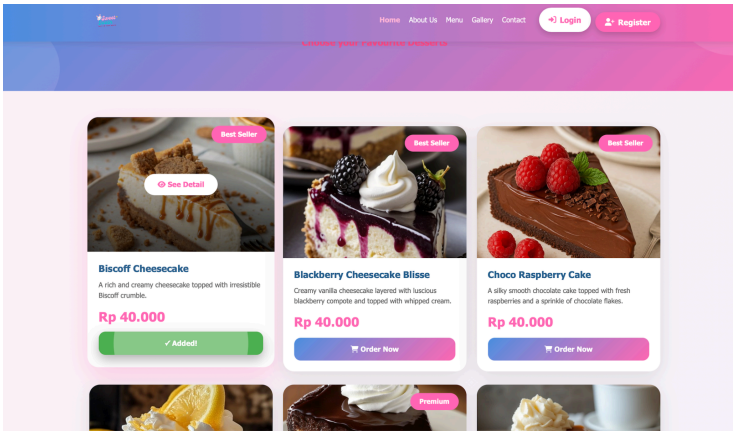
3. Event Listener Summary – Project 2

This section explains the five required event listener types implemented in the Sweet Tooth website according to the Project 2 Web Programming requirements.

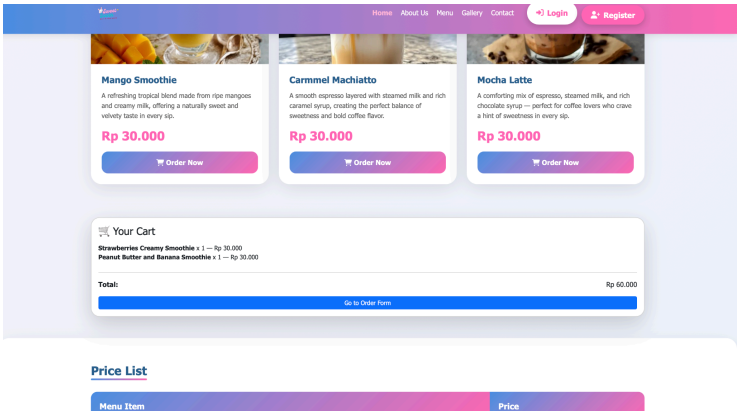
Event Type	Where Implemented	Target Element	Function / Purpose
Click Event	Contact, Login, Register, and Testimonial	Forgot Password link, password eye icons, and rating stars	Opens Forgot Password popup, toggles password visibility,and selects rating
Change Event	Contact Page	Delivery radio buttons, payment dropdown	Shows/hides delivery address field, displays payment helper message.
Mouse Move Event	Interactive Sweetness Meter in Homepage	Document or interactive container	Provides interactive animations such as sweetness meter or cursor-based UI movement.
Keypress Event	Register, Login, Contact Page	Email Validation	Preventing Users from Typing Spaces in the Email Field
Focus Event	All Forms	Input and textarea fields	Field with FOCUS (pink border + shadow)
Keyup Event	Contact Page	message textarea	Validates message input.
Blur Event	All Forms	All input fields, textarea, and dropdown(select) in forms	Field after BLUR (gray border, no shadow)

Click Event

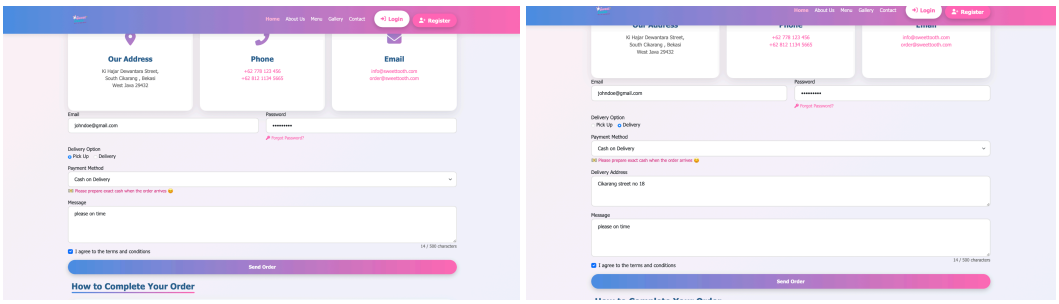




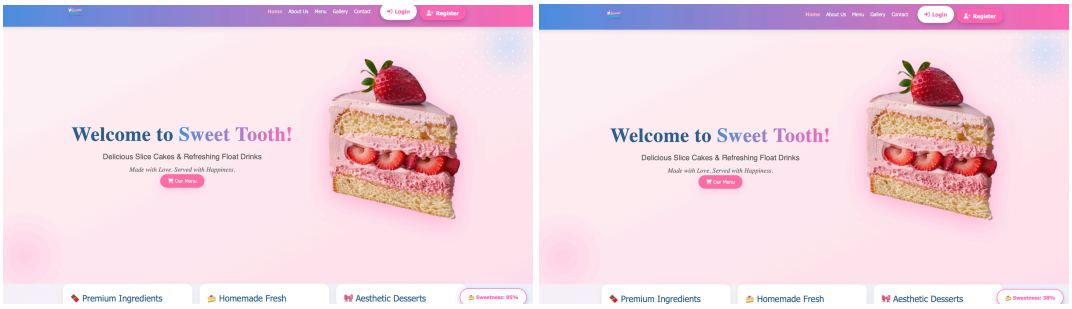
add to cart



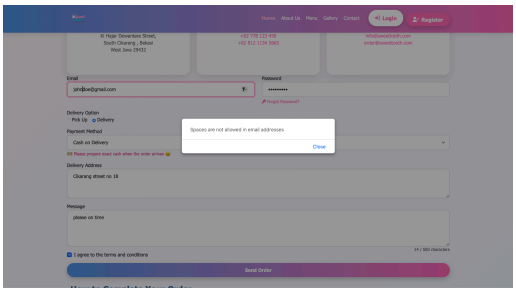
Change Event



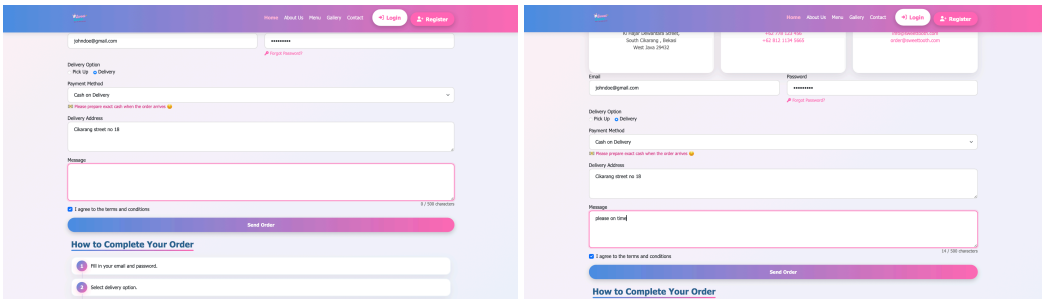
Mouse Move Event (Interactive Sweetness Meter)



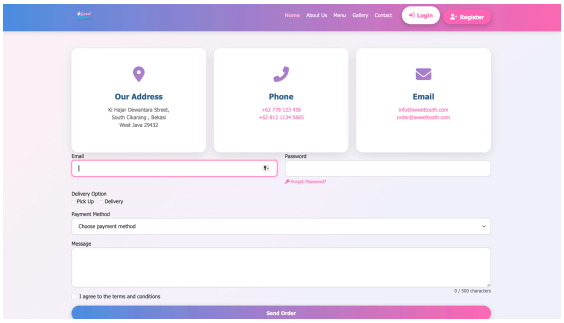
Keypress Event (Email Validation)



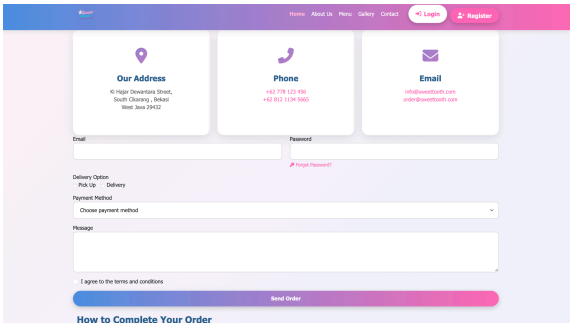
Keyup Event (Character Counter)



Focus Event (Field dengan FOCUS (pink border + shadow)



Blur Event (Field setelah BLUR (gray border, no shadow))



4. jQuery Integration Summary
jQuery is used across all major functionalities:

Examples

Form submission:
$('#contactOrderForm').on('submit', function(e){ ... })
Popup animation:
$('#forgotFormWrapper').slideDown(400)
Input value reading:
$('#emailOrder').val().trim()
Dynamic field display:
$('#delivery').change(function(){ ... })

jQuery is consistently applied, fulfilling all requirements.

5. Conclusion

The Sweet Tooth website successfully meets all Project 2 requirements, including the use of JavaScript, jQuery, event listeners, and five different forms. The website is fully interactive and provides a complete dessert-ordering experience.
